### 1.0 Handling Precautions

1) Since front polarizer is easily damaged, pay attention not to scratch it.
2) Be sure to turn off power supply when inserting or disconnecting from input connector.
3) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
4) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
5) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface.
6) Since CMOS LSI is used in this module, take care of static electricity and insure human earth when handling.
7) Do not open nor modify the Module Assembly.
8) Do not press the reflector sheet at the back of the module to any directions.
9) In case if a Module has to be put back into the packing container slot after once it was taken out from the container, do not press the center of the CCFL Reflector edge. Instead, press at the far ends of the CFL Reflector edge softly. Otherwise the TFT Module may be damaged.
10) At the insertion or removal of the Signal Interface Connector, be sure not to rotate nor tilt the Interface Connector of the TFT Module.
11) After installation of the TFT Module into an enclosure (LCD monitor housing, for example), do not twist nor bend the TFT Module even momentary. At designing the enclosure, it should be taken into consideration that no bending/twisting forces are applied to the TFT Module from outside. Otherwise the TFT Module may be damaged.
12) Cold cathode fluorescent lamp in LCD contains a small amount of mercury. Please follow local ordinances or regulations for disposal.
13) Small amount of materials having no flammability grade is used in the LCD module. The LCD module should be supplied by power complied with requirements of Limited Power Source(2.11, IEC60950 or UL1950), or be applied exemption.
14) The LCD module is designed so that the CFL in it is supplied by Limited Current Circuit(2.4, IEC60950 or UL1950). Do not connect the CFL in Hazardous Voltage Circuit.

### 2.0 General Description

This specification applies to the 15.0 inch Color TFT-LCD Module M150XN05.
The display supports the XGA (1024(H) $\times 768(V))$ screen format and 262,144 colors (RGB 6-bits data).
All input signals are 2 Channel TTL interface compatible.
This module does not contain an inverter card for backlight.

## Features

-XGA 1024(H) x 768(V) resolution
-2 CCFLs (Cold cathode Fluorescent Lamp)
-High contrast ratio, high aperture ratio
-Wide viewing angle
-High speed response
-Low power consumption

## Application

Desktop monitors

### 2.1 Display Characteristics

Unit: pixels

Note 1: Brightness is measured at the center point of brightness value with all pixels displaying white.

Unit: percentage of dimension of display area

Note 2: Brightness uniformity of these 9 points is defined as below:
(Min. brightness / Max. brightness) $\times 100 \%$

Note 3: TCO ' 99 Certification Requirements and test methods for environmental labeling of Display Report No. 2 defines Luminance uniformity as below:
((Lmax,+30deg. / Lmin,+30deg.) + (Lmax,-30deg. / Lmin,-30deg.)) / 2

1) Diagrammatic:

Effective area: $\mathrm{W} \times \mathrm{H}$
2) $D$ is the diagonal of the screen in centimeters. And $m_{d}$ is as follow.
$m_{d}(c m)=D \times 1.5$ with a minimum distance : $m_{d}=50 \mathrm{~cm}$
3) The measurement positions shall consist of an active white square of size 4 by 4 cm .
4)Measure $L_{\text {max }}+30^{\circ}$ and $L_{\text {min' }}+30^{\circ}$ that are given as points $L \& R$. And then rotated to an azimuth angle of -30 degrees and measure $L_{\text {max }}-30^{\circ}$ and $L_{\text {min }}{ }^{\prime}-30^{\circ}$ again using the same procedure.
5)The variation in luminance ratio is calculated as the ratio:

$$
L_{R}=\left(\left(L_{\text {max }}+30^{\circ} / L_{\text {min }}+30^{\circ}\right)+\left(L_{\text {max }}-30^{\circ} / L_{\text {min }}-30^{\circ}\right)\right) / 2 \leqq 1.7
$$

Note 4:

Unit: percentage of dimension of display area

I $L_{A^{-}}-L_{A^{\prime}} I / L_{A} \times 100 \%=1.2 \%$ max., $L_{A}$ and $L_{B}$ are brightness at location $A$ and $B$
$\left|L_{b} L_{B}\right| / L_{B} \times 100 \%=1.2 \%$ max., $L_{A}$ and $L_{b}$ are brightness at location $A^{\prime}$ and $B^{\prime}$

Note 1: CCFL Frequency should be carefully determined to avoid interference between inverter and TFT LCD
Note 2: Calculator value for reference (IRCFL $\times$ VCFLx2=PCFL)
Note 3: CCFL inverter should be able to give out a power that has a generating capacity of over 1300 voltage.
Lamp units need 1300 voltage minimum for ignition
Note 4: CCFL life time $30,000 \mathrm{hr}$ under 8 mA , it's defined as when the brightness is reduced by half.
To exceed 8.0 mA , life time accelerate drop down.

### 10.0 Vibration,Shock, and Drop

### 10.1 Vibration \& Shock

The module shall work error free after following vibration and shock condition. Likewise the module shall not sustain any damage after vibration and shock test.

### 10.1.1 Vibration Test Spec:

- Frequency: $10-200 \mathrm{~Hz}$
- Sweep: $\quad 30$ Minutes each Axis (X, Y, Z)
- Acceleration: $1.5 \mathrm{G}(10 \sim 200 \mathrm{~Hz}$ P- P)
- Test method:

| Acceleration (G) | 1.5 |
| :---: | :---: |
| Frequency (Hz) | $10 \sim 200 \sim 10$ |
| Active time(min) | 30 |

10.1.2 Shock Test Spec:

| Acceleration (G) | 50 |
| :---: | :---: |
| Active time(ms) | 20 |
| Wave form | half-sin |
| Times | 1 |

- Direction: $\pm X, \pm Y, \pm Z$

### 10.2 Drop

Package test: The drop height is defined as 60 cm .
(1 corner, 3 edges, 6 flat faces)
-- No damage and defect found for panel.

### 11.0 Environment

The display module will meet the provision of this specification during operating condition or after storage or shipment condition specified below. Operation at $10 \%$ beyond the specified range will not cause physical damage to the unit.

### 11.1 Temperature and Humidity

### 11.1.1 Operating Conditions

The display module operates error free, when operated under the following conditions;

Temperature
Relative Humidity
Wet Bulb Temperature
$0^{\circ} \mathrm{C}$ to $50^{\circ} \mathrm{C}$
20\% to $85 \%$
$39.0^{\circ} \mathrm{C}$

### 11.1.2 Shipping Conditions

The display module operates error free, after the following conditions;

Temperature
Relative Humidity
Wet Bulb Temperature
$-20{ }^{\circ} \mathrm{C}$ to $60^{\circ} \mathrm{C}$
5\% to 95\%
$39.0{ }^{\circ} \mathrm{C}$

### 11.2 Atmospheric Pressure

The display assembly is capable of being operated without affecting its operations over the pressure range as following specified:

|  | Pressure | Altitude |
| :---: | :---: | :---: |
| Maximum Pressure | 1040 hPa | $0 \mathrm{~m}=$ sea level |
| Minimum Pressure | 601 hPa | $3658 \mathrm{~m}=12,000$ feet |

Note: Non-operation altitude limit of this display module $=40,000$ feet. $=12193 \mathrm{~m}$.

### 11.3 Thermal Shock

The display module will not sustain damage after being subjected to 100 cycles of rapid temperature change. A cycle of rapid temperature change consists of varying the temperature from $-20^{\circ} \mathrm{C}$ to $60^{\circ} \mathrm{C}$, and back again.

Thermal shock cycle
$-20^{\circ} \mathrm{C}$ for 30 min
$60^{\circ} \mathrm{C}$ for 30 min
Power is not applied during the test. After temperature cycling, the unit is placed in normal room ambient for at least 4 hours before powering on.

### 12.0 Reliability

This display module and the packaging of that will comply following standards.

### 12.1 Failure Criteria

The display assembly will be considered as failing unit when it no longer meets any of the requirements stated in this specification. Only as for maximum white luminance, following criteria is applicable.

- Maximum white Luminance shall be $75 \mathrm{~cd} / \mathrm{m}^{2}$ or more.

### 12.2 Failure Rate

The average failure rate of the display module (from first power-on cycle till 1,000 hours later) will not exceed $1.0 \%$. The average failure rate of the display module from 1,000 hours until 10,000 hours will not exceed $0.70 \%$ per 1000 hours.

### 12.2.1 Usage

The assumed usage for the above criteria is:

- 220 power-on hours per month
- 500 power on/off cycles per month
- Maximum brightness setting
- Operation to be within office environment $\left(25^{\circ} \mathrm{C}\right.$ typical)

### 12.2.2 Component De-rating

All the components used in this device will be checked the load condition to meet the failure rate criteria.

### 12.3 CCFL Life

The assumed CCFL Life will be longer than 30,000 hours under stable condition at $25 \pm 5^{\circ} \mathrm{C}$;
Standard current at $8.0 \pm 0.5 \mathrm{~mA}$
Definition of life: brightness becomes $50 \%$ or less than the minimum luminance value of CCFL.

### 12.4 ON/OFF Cycle

The display module will be capable of being operated over the following ON/OFF Cycles.

| ON/OFF | Value | Cycle |
| :---: | :---: | :---: |
| +VDD and CCFL power | 36,000 | 10 seconds on $/ 10$ seconds off |

### 13.0 Safety

### 13.1 Sharp Edge Requirements

There will be no sharp edges or corners on the display assembly that could cause injury.

### 13.2 Materials

### 13.2.1 Toxicity

There will be no carcinogenic materials used anywhere in the display module. If toxic materials are used, they will be reviewed and approved by the responsible AUO Toxicologist.

### 13.2.2 Flammability

All components including electrical components that do not meet the flammability grade UL94-V1 in the module will complete the flammability rating exception approval process. The printed circuit board will be made from material rated $94-\mathrm{V} 1$ or better. The actual UL flammability rating will be printed on the printed circuit board.

### 14.0 Other requirements

### 14.1 Smoke Free Design

By any single failure, any smoke nor strange smell shall not be observed by the operator.

### 14.2 National Test Lab Requirement

The display module will satisfy all requirements for compliance to the following requirement:

UL 1950, First Edition
CSA C22.2 No.950-M89
IEC 950
EN 60950
U.S.A. Information Technology Equipment

Canada, Information Technology Equipment
International, Information Technology Equipment
International, Information Processing Equipment
(European Norm for IEC950)

The construction of the display module is designed to suppress EMI. When mounted into a specified host system, the system will meet the following EMI requirement:

FCC Part 15 Class B
VCCI Class 2
CISPR 22, class B
Taiwan CNS standard
China CCIB standard
