### 6.1 TIMING CHART

Notes 1) Reference level for each timing signal is 1.5V unless it is stated on the chart, high level voltage (VIH) and low level voltage (VIL) are defined as follows:

$$V_{IH} \geq 2.0V \quad V_{IL} \leq 0.8V$$

The above definition conforms to the specifications of LVDS transmitter (THC63LVDM83A / by THine Microsystems, Inc.).

2) The timing of DCLK to other signals conforms to the specifications of LVDS transmitter.

3) HSYNC, VSYNC timing is specified in negative polarity.

4) HSYNC pulse is needed while data is invalid (blanking period).

- 2)  $TVBP+TVFP \leq 253 \text{ THP}$ .
- 3) TSTC and THTC conforms to the specifications of LVDS transmitter.  
It is preferable to check the specifications of LVDS transmitter in your system.

## 10. PRECAUTIONS

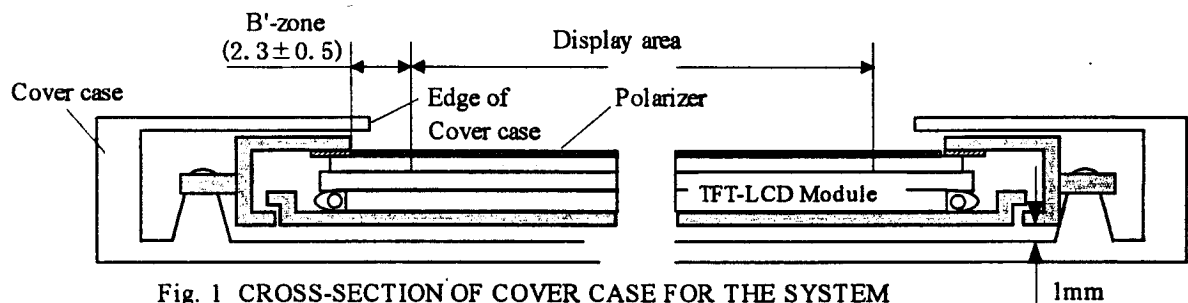

Please take care about the followings in handling the TFT Module.

### 10.1 PRECAUTIONS IN MOUNTING MODULE

- (1) Please do not give a stress on the module which cause damage on the metal, plastic, and LCD glass.
- (2) The module should be appropriately handled by both hands. Please never hold top and bottom side of the module by just one hand.
- (3) The module should be mounted into the enclosure by each mounting hole on the corner.
- (4) Please ensure the module not be stressed in being mounted.
- (5) Then the module should be placed around 1mm from inside of the enclosure as shown in Fig. 1.

In case of placing CFL inverter unit in the rear side of the module, the transformer of the inverter also should be kept away more than 1mm from the module considering heat and electrical affection.

It is preferable to check the distance with the performance of the transformer.

- (6) The edge of the front plastic window should be within the B'-zone shown in Fig. 1 by more than 1 mm from the metal frame window of the module.
- (7) It is preferable to place a transparent plate on the display area in order to protect the polarizer and LCD glass. The plate should be placed away from the surface of the module.
- (8) Please do not use acetic acid & chlorine type materials for enclosure & other components surrounding the module since these materials give rise to the gas at high temperature which degrade the polarizer and cause open circuit at the module electrical circuit due to electro-chemical reaction.
- (9) Polarizer is easily scratched and should be carefully handled then. Please do not touch, push, and rub the polarizer by hard materials such as glass, tweezers and others harder than HB pencil lead. Also, please do not touch it by bare-hand.
- (10) In case of cleaning the polarizer, please wipe it with absorbent cotton, chamois or other soft materials absorbing Normal-Hexane recommended as cleaning chemicals.
- (11) Saliva and water drop should be immediately wiped off since they degrade the polarizer.
- (12) Please do not disassemble and modify the module yourselves since it may malfunction.
- (13) Metal frame should not be touched with bare-hand and dirty gloves since it may be degraded.
- (14) The module rear side should not be touched with metal in being mounted.
- (15) Please do not pull and hold the lamp cable.

## 10.2 PRECAUTIONS IN OPERATION OF MODULE

- (1) The module is heated by the backlight in operation. The module needs to be appropriately being cooled in order to avoid brightness reduction so that the ambient temperature would be within the specifications.
- (2) Spike noise from the power supply may cause functional error and damage the module.  
Overshooting & undershooting of VDD voltage should be within  $\pm 200$  mV under the maximum rating.
- (3) Optical performance of the TFT-LCD changes by the temperature. (Response time gets longer at lower temperature.)
- (4) Lamp start-up time also gets longer at lower temperature.
- (5) In case that environmental temperature suddenly changes, it may cause the condensation and dew on the module.  
Please be careful so that the condensation would not happen since it cause the degrade of optical performance and malfunction.
- (6) Image sticking may happen after the same pattern being displayed for long time but it will disappear soon.  
Please do not display the same pattern for long time so as not to bring about image sticking.
- (7) Please ensure the countermeasures for electro-magnetic interference which affect the electrical circuit of the module.  
Grounding & shielding method is effective to reduce the radiation.
- (8) Acoustic noise may happen in the backlight operation. If necessary, please take appropriate countermeasures.
- (9) In case the lamp cable is made longer, it may cause brightness drop and degrade lamp start-up.  
It is preferable to connect it directly to CFL inverter.
- (10) Please do not connect and remove the module while a main system is powered on.
- (11) Grounding the metal of the module is preferable to prevent the video from flickering and rolling.

## 10.3 ELECTRO-STATIC DISCHARGE CONTROL

- (1) The module is easily damaged when it suffers from electro-static discharge over the specification.  
Please take care about the control such as grounding human body in handing the module. Also, please do not touch the connector with bare-hand.
- (2) Protection film on polarizer should be slowly removed so that electro-static discharge could be reduced.

## 10.4 PRECAUTIONS FOR LIGHT EXPOSURE

- (1) Please do not expose the module against the intensive light which is likely to degrade the polarizer & color filter.

## 10.5 PRECAUTIONS IN STORAGE OF MODULE

In case of long term storage of the module, the followings should be taken care about.

- (1) The module should be stored in a dark with appropriate humidity (60 % RH or below) at 5 to 35 °C.
- (2) Nothing should contact on the polarizer while the module being stored. It is preferable to store the modules in the packaging of the shipment.

## 10.6 PRECAUTIONS IN HANDLING PROTECTION FILM

- (1) The protection film on polarizer should be slowly removed with wrist band grounded so as to reduce electro-static discharge. Ionized air blow is also effective.
- (2) In case the polarizer is rubbed by the protection film while being removed, the adhesive on the film may remain on the polarizer. Then, please be careful not to rub the polarizer while removing the protection film.
- (3) Please take care about the storage condition in case of remaining the protection film on the polarizer.  
The adhesive on the film may move onto the polarizer at high temperature & high humidity.
- (4) The adhesive remaining on the polarizer should be wiped off with absorbent cotton absorbing Normal Hexane.

## 10.7 SAFETY

- (1) The module is unit which consists of LCD glass and backlight. In case of being dropped and mechanically shocked, it may be cracked. Please take care about the cracked glass. In addition, hands should be washed if you touch the liquid material from the broken LCD.
- (2) Electrically conductive materials should be never put into the module. Backlight unit generates especially high voltage and you should take care about it.

## 10.8 ECOLOGY

- (1) The lamp of backlight has a little mercury. Please handle it appropriately in case of disposal.
- (2) Flex cable and Printed Wire Board have a little lead. Then, please handle them appropriately in case of disposal.

## 10.9 USE RESTRICTIONS AND LIMITATIONS

- (1) This product is not authorized for use in life support devices or systems, military applications, or other applications which pose a significant risk of personal injury. Therefore, the product shall not be used for such purposes.
- (2) In no event shall Hitachi, Ltd., be liable for any incidental, indirect, or consequential damages in connection with the installation or use of this product, even if informed of the possibility thereof in advance. These limitations apply to all causes of action in the aggregate, including without limitation breach of contract, breach of warranty, negligence, strict liability, misrepresentation and other torts.

## 10.10 OTHERS

- (1) Electrical components which does not affect the module electrical performance may be changed without notice because of availability, etc.
