APPLICATIONS

This specification is applied to the following TFT Liquid Crystal Display Module with Back-light unit.

Note : Inverter device for Back-light is not built in and so it needs to be prepared on yours side.

- Type name : TX38D88VC1GAA
- Display Area : H304.1×V228.1 [mm]
- Display Pixels : H1024×V768 pixels
(Display Dots) (H(1024×3)×V768 [dots])
- Voltage of VDD : 3.3V
- Pixel Pitch : H0.297×V0.297
- Color Pixel Arrangement : R·G·B Vertical Stripe
- Display Mode : Transmissive &
Normally White Mode
- Color Number : 262k Colors
- Direction with Wider Viewing Angle : Lower side of 6 o'clock
(Azimuth $\phi=270^\circ$)
- Dimensions Outlines : 315.8(W)×241.5(H)×9.7MAX(T) [mm]
- Weight : 800 TYP. [g]
- Interface : 1ch-LVDS
- Surface Polarizing Film : Glare Polarizing Film with Antireflection Coating
- Back-light : Two Cold Cathode Fluorescent Lamp
(Lower side)
Back-light inverter is not contained in Module.

Note 1) Environmental temperature and humidity of this unit, not of system installed with this unit.

At low temperature the brightness of CFL drop and the life time of CFL become to be short.

2) Ambient temp. $T_a \leq 40^\circ\text{C}$: 85%RH MAX. without condensation.

$T_a > 40^\circ\text{C}$: Absolute humidity must be lower than the humidity of 85%RH at 40°C . without condensation.

3) 10~500Hz, (Except resonance frequency), 20minutes/cycle, 1cycle, X·Y·Z

4) 3ms, X·Y·Z·Z'

5) With mounting protective spacer (ref. page 4-2/3)

Adding protective spacer at shock & vibration test

Shaded area is to be supported with additional spacer.

- (1) This protective spacer is to be added at shock and vibration test on the front side

- (2) This protective spacer is to be added shock and vibration test on the other side

1.3 Connection between PC Ground and Metal frame.

Metal frame of the module should be grounded with PC's ground in case that protection film is being peeled off while operating the module. Unless you connect between metal frame and PC's Ground. PC's system happens to shut down due to the influence of electrostatic discharge caused by peeling off the protection film.

2. OPTICAL CHARACTERISTICS

The following items are measured on the conditions that this unit operation (TFT panel and Back-light) and measuring systems are stable. (more than 30minites' operation)

The ambient light excluding The Back-light unit is nothing.

- Measuring equipment : TOPCON BM-7, Prichard 1980A, or equivalent
- Measuring point : Active area center

Temperature of LCD=25°C, V_{DD}=3.3V, f_v=60Hz, f_L=50kHz, I_L=6mA

Note 1) VCM=+1.25V ~ +1.375V

VCM is common mode voltage of LVDS transmitter/receiver.

The input terminal of LVDS transmitter is terminated with 100Ω.

2) f_v=60Hz, f_{CLK}=65MHz, VDD=3.3V, DC Current.

Typical value is measured when displaying vertical 64 gray scale.

Maximum is measured when displaying Vertical-stripe (Black-Gray 7).

3) As this module contains 0.8A fuse, prepare current source that is enough for cutting current fuse when a trouble happens. (larger than 2A.)

4) For LVDS Transmitter Input

5) Vsync Frequency (f_H) (Recommendation) : 60Hz

Flicker level will be worse by shift of V-Sync Frequency

Note 1) I_L is Current of GND side.

2) Higher I_L cause the short life time of CFL.

3) Lamp frequency may produce interference with Hsync frequency, causing beat or flicker on the display.

4) Starting Lamp Voltage is specified to the output of inverter with ballast capacitance > 22pF.

5) Ta=0°C

6) CFL Life Time is the period that the brightness is half as much as the initial.

7) I_L=6.0mA

8. PRECAUTIONS

Please pay attention to the followings when you use this TFT/LCD module with Back-light unit.

8.1 MOUNTING PRECAUTION

- (1) You must mount Module using mounting holes arranged in 8 corners tightly.
- (2) You should consider the mounting structure so that uneven force (ex. twisted stress) is not applied to Module.
And the case which Module is mounted should have sufficient strength so that external force is not transmitted directly to Module.
- (3) To improve the strength of module against the mechanical shock the space between module and the case should be 0.3~1.0mm.

- (4) Acetic acid type and choline type materials for the cover case are not desirable because the former generate corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (5) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub by dustclothes with chemical treatment.
Do not touch the surface of polarizer with bare hand or greasy close. (Some cosmetics are detrimental to the polarizer.)
- (6) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials chamois soaked petroleum benzin. Don't use acetone, toluene, hexane and ethanol because they cause chemical damage to the polarizer.
Recommendation chemical ; Isopropyl Alcohol
- (7) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (8) Do not open the case because inside circuits have not sufficient strength.
- (9) Use fingerstalls of soft gloves in order to keep clean display quality, when you handle the device for incoming inspection and assembly.
- (10) Do not pull or do not fold the CFL cable.
- (11) You must mount Module on the plain case.
- (12) Do not connect I/F Connector with excessive forces.

8.2 OPERATING PRECAUTION

- (1) Response time depends on the temperature. (In lower temperature, it becomes longer).
And also Transmittance and Color depend on the temperature.
- (2) Brightness depends on the temperature. (In lower temperature, it becomes lower).
And in lower temperature, response time (required time that brightness is stable after turn on) becomes longer.
- (3) Be careful for condensation at sudden temperature change.
Condensation make damage to polarizer or electrical contact part.
And after fading condensation, smear or spot will occur.
- (4) When fixed patterns are displayed at long times, afterimage is likely to occur.
- (5) The Module have high frequency circuit. If you need to shield the electromagnetic noise, please do in yours.
- (6) When Back-light unit is operating, it sounds.
If you need to shield the noise, please do in yours.
- (7) Please connect the Back-light connector to the inverter circuit directly.
The long cable between CFL and the inverter may cause the brightness drop of CFL and may cause the rise of starting lamp Voltage(Vs).
- (8) Do not connect or remove the module from main system with power applied.

8.3 ELECTROSTATIC DISCHARGE CONTROL

- (1) Since Module is composed with electronic circuit, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through list band etc.. And don't touch I/F pin directly.
- (2) Protection film for a polarizer on a module should be slowly peeled off so that the electrostatic change can be minimized.

8.4 PRECAUTION FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

8.5 STORAGE

When storing Module as spares for long time, the following precautions are necessary.

- (1) Store them in a dark place ; do not expose them to sunlight or fluorescent light.
Keep the temperature between 5°C and 35°C at normal humidity.

- (2) The polarizer surface should not come in contact with any other object.
It is recommended that they be stored in the container in which they were shipped.

Hitachi Displays,Ltd	Date	Feb. 26, 2004	Sh. No.	3284TTD 2134-1	Page	11-3/4
----------------------	------	---------------	------------	----------------	------	--------

8.6 Wiping for Polarizer's surface

Polarizer with low reflection layer is lowered of reflection on LCD surface by AR coat on anti glare layer.

However charging for surface friction will be added more than normal coat by chemical composition on AR layer.

As a result, it is characteristic that are easier to absorption.

And hardness on AR layer is soft more than normal Polarizer.

Please be careful about handling.

8.7 SAFETY

- (1) If Module is broken, be careful to handle not to injure. (TFT/LCD and Lamp are made of glass.)
Please wash hands sufficiently when you touch the liquid crystal coming out from broken LCDs.
- (2) As Back-light unit has high voltage circuit internal, do not open the case and do not insert foreign materials in the case.
- (3) The CFL inverter should be designed to include the function of output shutdown in case the output overcurrent happer due to any backlight trouble. The shutdown function should be assured to work in abnormal condition at t he actual system.

8.8 Environmental protection

- (1) The TFT module contains cold cathode fluorescent lamps. Please follow local ordinance or regulations for its disposal.
- (2) Flexible circuits board and printed circuits board used in a module contain of lead. Please follow local ordinance or regulations for its disposal.
