$$\textcircled{1} \quad trCP, tfCP < \{tCCL - (tWCLH + tWCLL)\} / 2$$

Please use on condition that  $\textcircled{1}$  is filled.

## 1 2. Supply Voltage Sequence Condition

DO NOT apply DC voltage to the LCD panel. DC voltage induce irreversible electrochemical reactions and reduce LCD life. Always follow the power supply ON/OFF sequence of VDD first, input signal second, VCONT third and finally DISP. This will prevent DC driving of the LCD or CMOS LSI latch up as shown below.

\*1 Take interval time for minimum 500ms once you cut off the Disp signal.

\* Control the supply voltage sequence not to float all signal line when the LCD panel is driving.

### 1 3 . Backlight Characteristics

#### 13-1. CFL ratings

Measuring Inverter : KCI-13 (MINEBEA ELECTRONICS)

Temp. = 25°C

ITEM	SYMBOL	MIN.	TYP.	MAX.	NOTE
Starting discharge Voltage *1	VS	—	—	1,360 Vrms.	0 °C
		—	—	905 Vrms.	25 °C
Discharging tube current	IL	2.0 mA <sub>rms</sub> .	5.0 mA <sub>rms</sub> .	6.0 mA <sub>rms</sub> .	—

Operating life *2 (IL=5.0 mA <sub>rms</sub> .)	T	40,000 Hr.	60,000 Hr.	—	—
Operating frequency	F	40 kHz	—	100 kHz	—

\*1 The Non-load output voltage (VS) of the inverter should be designed to have some margin, because VS may increase due to the leak current which may be caused by wiring of CFL cables. (Reference value : 1,768 Vrms MIN.)

\*2 When the illuminance or quantity of light has decreased to 50 % of the initial value.

#### 13-2. Surface Brightness of LCD ( IL = 5.0 mA<sub>rms</sub>. × 2 )

Temp. =25°C

ITEM	MIN.	TYP.	MAX.	UNIT
Brightness	100	150	—	cd/m <sup>2</sup>

(Measuring points)

- 1) Rating is defined as the average brightness inside the viewing area.
- 2) 30 minutes after CFL is turned on. (Ambient Temp.=25°C)
- 3) The inverter should meet the eccentric conditions;
  - Sine, symmetric waveform without spike in positive and negative.

#### 1 4. Lot Number Identification

The lot number shall be indicated on the back of the backlight case of each LCD.

#### 1 5. Warranty

##### 15-1. Incoming inspection

Please inspect the LCD within one month after your receipt.

##### 15-2. Production Warranty

Kyocera warrants its LCDs for a period of 12 months after receipt by the purchaser, and within the limits specified. Kyocera shall, by mutual agreement, replace or rework defective LCDs that are shown to be Kyocera's responsibility.

## 16. Precautions for use

### 16-1. Installation of the LCD

1. Please ground either of the mounting(screw) holes located at each corner of an LCD module, in order to stabilize brightness and display quality.
2. The LCD shall be installed so that there is no pressure on the LSI chips.
3. The LCD shall be installed flat, without twisting or bending.
4. The display window size should be the same as the effective viewing area.
5. In case you use outside frame of effective viewing area as outward appearance of your product, unevenness of its outward appearance is out of guarantee.
6. Do not pull the CFL lead wires and do not bend the root of the wires. Housing should be designed to protect CFL lead wires from external stress.

### 16-2. Static Electricity

1. Since CMOS ICs are mounted directly onto the LCD glass, protection from static electricity is required. Operation should wear ground straps.

### 16-3. LCD Operation

1. The LCD shall be operated within the limits specified. Operation at values outside of these limits may shorten life, and/or harm display images.
2. Vop must be adjusted to optimize viewing angle and contrast.
3. Operation of the LCD at temperature below the limit specified may cause image degradation and/or bubbles. It may also change the characteristics of the liquid crystal. This phenomenon may not recover. The LCD shall be operated within the temperature limits specified.

### 16-4. Storage

1. The LCD shall be stored within the temperature and humidity limits specified. Store in a dark area, and protected the LCD from direct sunlight or fluorescent light.
2. The LCD should be packaged to prevent damage.

#### 16-5. Screen Surface

1. DO NOT store in a high humidity environment for extended periods. Image degradation, bubbles, and/or peeling off of polarizer may result.
2. The front polarizer is easily scratched or damaged. Prevent touching it with any hard material, and from being pushed or rubbed.
3. The LCD screen may be cleaned with a soft cloth or cotton pad. Methanol, or Isopropyl Alcohol may be used, but insure that all solvent residue is removed.
4. Water may cause damage or discoloration of the polarizer. Clean any condensation or moisture from any source immediately.
5. Always keep the LCD free from condensation during testing. Condensation may permanently spot or stain the polarizers.

17. Reliability Data / Environmental Test

- \* Each test item uses a test LCD only once. The tested LCD is not used in any other tests.
- \* The LCD is tested in circumstances in which there is no condensation.
- \* The tested LCD is inspected after 24 hours of storage at room temperature and room humidity after each test is finished.
- \* The reliability test is not an out-going inspection.
- \* The results of the reliability test are for your reference purpose only. The reliability test is conducted only to examine the LCD's capability.
